Bipartisan Support for Open Internet Unscores Need for Strong Policy Actions to Prevent Blocking, Discrimination

COMPTEL Comments on Results of IFBA Open Internet Survey

WASHINGTON, D.C. – This morning the Internet Freedom Business Alliance reported results of a nationwide Open Internet survey, which showed that concerns about monopoly control and content restrictions are of concern to both conservatives and liberals alike. The poll found that 81 percent of all voters, including Republicans, support an open Internet and endorse the key elements of net neutrality rules.

The following statement can be attributed to Chip Pickering, CEO of COMPTEL, the leading trade association for the competitive communications industry:

“While inside the beltway, many like to divide opinions on the open Internet down party lines, the IFBA’s poll confirms that across the country, a majority of citizens – whether they’re Republican or Democrat, conservative or liberal – are concerned about the power dominant incumbents can wield over the Internet.

There is a bipartisan belief that consumers need to be protected from anticompetitive practices, and be assured that no one Internet provider can influence or impede content as Internet service providers. We have already seen examples of how such providers have used their market power to block or throttle access to content or extract access tolls so content is delivered. These actions have made it clear that strong rules are essential to maintaining an open Internet and ensuring that our nation has functioning, competitive free markets.”
